

Literature

If you need information on any of Cooper B-Line's other product families, our Electronic Catalog CD-ROM is available, where you can view, browse, search and print the entire collection of B-Line catalogs for the electrical, mechanical and comm/data markets. This interactive CD provides our customers with both a "Catalog Center" and "Design Center". The Catalog Center allows the ability to immediately view specific information found in each current catalog, broken down by the appropriate market. Also available are competitor cross-references, product specifications and contact information for B-Line sales and engineering personnel. The Design Center features the ability to access AutoCAD Details, Cooper B-Line's software programs, technical information by product line and B-Line's Technical Paper Series.

Finding the B-Line product line of choice is as easy as clicking your mouse. Depending on your needs, simply select from either Electrical, Mechanical or Comm/Data in the CD's Catalog Center Main Menu and you immediately have access to the B-Line product line catalogs available for that market. To make it even easier, we've set up each catalog to open directly to the Table of Contents page for that respective catalog, where available. All Table of Contents listings and pictorial indices are linked to the appropriate product page, and for even quicker access to information within a catalog, there's also an expanded listing of "Bookmarks" along the left-hand side navigation pane.

Copies of the Cooper B-Line Electronic Catalog, or any other Cooper B-Line publication, may be ordered through the CD request form, or by contacting Cooper B-Line literature fulfillment at:

Phone: (314) 426-1800
